SUMMARY

Java Full Stack and Python developer specializing in building scalable, high-performance web applications. Skilled in React.js, Node.js, Laravel, Flask, and REST API design. Hands-on experience in SQL, MongoDB, data analytics, and integrating backend services with dynamic frontends. Adept in Agile development, debugging, and unit testing. Proven track record of delivering real-world projects and internships aligned with full SDLC, from requirements gathering to deployment.

EDUCATIONAL QUALIFICATIONS

Government College of Engineering and Research, Avasari Kh., Pune

B.E, Computer Engineering, 9.50/10.00 (CGPA)

Pune, India

2023 - 2026

Government Polytechnic Solapur

Diploma (Computer Science), -: 90.46%

Solapur, India

2020 - 2023

Viday-Mandir Highschool, Laxmi Dahiwadi

SSC Board, Class - X: 92.8%

Solapur, India

2019 - 2020

SKILLS

- **Programming Languages:** Java, Python, JavaScript, C, C++, PHP, SQL
- **Web Technologies & Frameworks:** Node.js, Express.js, HTML5, CSS3, Bootstrap, React.js, Laravel, Django
- **Databases & Backend:** MongoDB, MySQL, Firebase, RESTful APIs, CRUD operations
- **Concepts:** Data Structures & Algorithms (DSA), OOP, SDLC, MVC Architecture, Debugging, Unit Testing
- **Version Control & Collaboration Tools:** Git (Branching, Repo management)
- **Tools & Platforms:** Git, GitHub, Postman, VS Code, Jupyter Notebook, Android Studio
- **Operating System:** Windows, Linux
- **Relevant Skills:** Java Full Stack Development, Python for Data Analytics, React.js, Node.js, REST APIs, MySQL, MongoDB, Data Structures & Algorithms (DSA), OOP, SDLC, Debugging, Unit Testing

RELEVANT COURSES

Python And Artificial Intelligence	Advanced C++	Backend Web Development	DSA using C++
AWS User Groups	IIT Bombay	Using Node.js, Express & Javascript	Google Developer Student club

WORK EXPERIENCE

1) Web Developer Intern at Maveric InfoTech

HTML5, CSS, Javascript

Jul 2022 – Aug 2022

• In this Internship I created a website Coffee Shop Website (A coffee ordering website). I used HTML to add tags, icons, and images to the website. CSS was used to enhance its visual appearance, improve user experience, and ensure consistency across different web pages.

2) Data Science Intern at Prodigy InfoTech

Python (Pandas, Numpy, Matplotlib, Scikit-learn)

Nov 2023 – Dec 2023

• Gained hands-on experience with data preprocessing, exploratory data analysis, machine learning algorithms, data visualization using Python and libraries like Pandas, NumPy, Matplotlib, and Scikit-learn.

3) Laravel Developer Intern at Maveric InfoTech

PHP, Laravel, CSS, Java, JavaScript, HTML, Hack

Jan 2025 – Feb 2025

- Designed a feature-rich platform for job seekers and employers, including automatic CV generation, job postings, and real-time job matching.
- Engineered a scalable job platform utilizing a PHP backend, MySQL database, and responsive Bootstrap frontend, resulting in a 30% faster page load time and improved user interface satisfaction scores.

PROJECTS

1. movie-recommender-system-using-Kaggle-And-Firebase

[github:// movie recommender-system](https://github.com/onkarbansode3333/movie-recommender-system)

(content-based + hybrid Approach)

Kaggle, Firebase, streamlet, numpy, pandas, nltk, ast, sklearn, (Machine Learning)

- Built a Movie Recommender System integrating Kaggle datasets and Firebase, leveraging content-based and hybrid models for personalized and real-time suggestions.
- Optimized recommendation accuracy with advanced algorithms, feature engineering, and real-time data handling.

2. Java Billing System

[github:// Billing System](#)

Java, Java Swing, iText (PDF), AWT, File I/O

Engineered a desktop-based billing and invoicing system using Java Swing and AWT, featuring dynamic item entry, automated tax calculations, and integrated date/calendar selection. Implemented PDF generation with iText for invoice exports and local storage. Applied object-oriented programming principles to modularize components for scalability and maintenance. Enhanced billing workflow automation, reducing manual entry time by 60% and improving operational accuracy.

3. Online Job Portal

[github://OnlineJobPortal](#)

PHP, Laravel, CSS, Java, JavaScript, HTML, Hack November, 2024

- Designed a feature-rich platform for job seekers and employers, including automatic CV generation, job postings, and real-time job matching.
- Engineered a job platform backend utilizing PHP and a MySQL database, achieving a better uptime and processing multiple user requests per minute, ensuring seamless platform functionality.

4. Digital Warranty Vault

[github:// Digital Warranty Vault](#)

Flask, SQLite, Bootstrap

- Developed a lightweight MicroSaaS application for managing and tracking digital warranties with features to add, view, and delete warranty details. Built with a Flask backend, SQLite database, and seamless functionality and user experience across devices.

ACHIEVEMENTS

- NMMS Scholar (Stage 1)** – Awarded the National Means-cum-Merit Scholarship for academic excellence 2018
- Recognized by DevTown** - for significant contributions in community growth and engagement. 2024
- National Slogan Writing Winner – NSO, Govt. of India** – Secured **1st Prize** in a national-level competition by the Ministry of Statistics & Programme Implementation; selected from 300+ entries for creativity and relevance 2025
- Competitive Exam Qualifier** – Admitted to top government engineering colleges by qualifying multiple competitive exams in a single attempt 2025

POSITIONS OF RESPONSIBILITY

- Technical Head, CSAC** – Civil Services Aspirants Club (Inter College club of GCOEARA) November 2023 -Present
- Core Member of COMPSA (Computer Department Student Association)** June 2024 - Present
- Vice Chairperson, CSAC GCOEARA** February 2024 – Present
- Campus Ambassador(DevTown)** November 2023 - Present
